DESIGNED AND MANUFACTURED BY TEHNOMARKET

TMB 78
TMB 86

TMB CONVEX 96
TMB CONVEX 104

Tehnomarket TMB series of bulletproof aluminium systems for windows and doors features special steel reinforcements, mounted within the profiles, and the option to use specially laminated security glass packages up to 57mm width. Thermal break is done with either 16mm or 24mm polyamide stripes that results in two levels of insulation and offers easy integration into requirements of every individual project. TMB system offers the option to manufacture a wide variety of different architectural elements with different sash and frame configurations for application on buildings with special security requirements, both in exterior as well as interior.

Both TMB 78 and TMB 86 aluminium impenetrable systems offer the optional internal wooden cladding made from first class, quality hardwood that gives a warm, subtle nuance to every space enables simple integration in interior concepts that feature wooden design accents. Aluminium-wood systems are labelled TMB CONVEX 96 i TMB CONVEX 104. The wooden cladding is installed onto aluminium profiles with help of special polyamide cleats that enable the independent dilatation of both materials. This way, the optimal bond of different materials guarantees long term durability of windows and doors.

TMB

UNSURPASSED SAFETY

BULLETPROOF SYSTEM CONCEPT

TMB bulletproof systems are designed to offer a complete protection from gunshots, combined with modern aesthetics, thermal performance and longievy of aluminium windows. Main purpose of these systems is to provide increased security of persons and interior spaces, with inconspicuous appearance that does not differ from contemporary designers solutions and enables easy visual integration with all types of projects.

INTEGRATED PROTECTIVE PROFILES

Tehnomarket TMB series of bulletproof windows and door systems features 5mm thick integrated protective profiles, made of hardened steel, combined with special, laminated glass packages up to 57mm wide and guarantee impenetrability of entire element construction.

STANDARD GLASS SURFACES

Beside increased safety and resistance to gun shots, all elements manufactured in Tehnomarket TMB offer the same glass to profile ratio as standard aluminium windows, with maximal sash dimensions of 750x2050mm that allow optimal light ingress and comfortable interiors.

DESIGN

Intelligent design with integrated reinforcements, two levels of thermal insulation and installation depth of 78mm and 104mm, with optional wooden cladding offers unmatched levels of customization.
