INTERIO P29

GLASS PARTITION WALL SYSTEM

INTERIO P29 system of light interior partitions is a modern, modular and elegant solution for the new generation of commercial properties, where exclusive materialization, fast installation without classic construction works and sophisticated appearance meet all the needs of buildings of this type. Extremely small system depth of only 29 mm offers the possibility of installation without losing the useful surface in the interior, with high flexibility in the design of the space and the formation of functional units. The Interio P29 system offers two visually different options - one with a visible aluminum frame and a choice of wooden or glass door panel, and the other with the all-glass elements and integrated doors without aluminum frames.

SOPHISTICATION

INTERIO P29 glass partition wall system offers exceptional features during the interior design and planing stage, with highly modular system profiles, hardware sets and several options for door panels. This elegant system will efficiently enrich any interior with noticeable improvement in functionality.

TRANSPARENCY

Narrow visible profile surfaces and high system strength allow for production of large dimensioned partition walls and creation of bright, airy, modern offices with maximal natural light utilisation in interior.

INTERIO P29 | technical specification

installation depth	29mm
basic frame height	25mm
door frame width	48mm
glazing thickness	6mm-12mm
